Methodology and limitations

Prices were generated from the same Dome Prints calculation engine used for public online orders.

Observations cover 3 sizes × 6 quantities, using standard acrylic adhesive.

Each size is measured by its rectangular width × height footprint; custom shapes use the same bounding-box area method.

This is a first-party price dataset, not an industry-wide survey or a claim about competitor pricing.

Prices can change as production, freight, duties, or the public pricing model changes.
